

2022 Release Notes

Release Version 2212 | December

Improvements and Fixes:

- Employee names with quotation marks should save properly in the employee information page.
- Resolved an issue that would sometimes reset an employee's home location.
- Resolved an issue that would sometimes prevent the display of form fields in the employee information page.
- Resolved issues on the employee form that would sometimes prevent changing or deleting an employee's email address.
- Fixed an issue that would prevent managers without location access to update an employee without a home location.
- Managers without payrate access can now hire employees if they have hiring permissions.
- Resolved an issue that sometimes prevented users from loading the Applicants page.
- Update to prevent Chrome from autofilling payroll ID field in employee profile.

New Features:

- [Careerjet](#) job board integration is live! Anyone using TimeForge for [Applicant Tracking and Hiring](#) is already taking advantage of this integration.

Release Version 2207 | July

Improvements and Fixes:

- Resolved an issue with copying breaks in Daily View that would allow users to create duplicate shifts for the same employee.
- Resolved an issue with the Weekly Averages report that prevented it from completing in very rare cases.
- Stability improvements for our [RPO integration](#) to make it more streamlined and to prevent syncing issues caused by duplicate emails.
- All eligible documents in an HR Activity should now be assigned to employees as appropriate.
- Added syncing of negative sales for our [CBS NorthStar integration](#). Sales in TimeForge are now a 1:1 match with NorthStar's data.

New Features:

- We are expanding our [Paycor integration](#) to handle more employee data, including employee names, departments/positions, pay rates, and hire dates.

Release Version 2206 | June

Improvements and Fixes:

- Improved penalty tracking for close/opens. If you operate in a region with [clopening laws](#), TimeForge can [automatically track close/opens](#) and apply penalties to help keep you compliant.
- When a manager override is required on the timeclock, employees are now instructed to inform their manager of the override request.
- Stability improvements for the [Time Machine](#) timeclock to resolve an intermittent issue with fingerprint reader connectivity. The fingerprint reader will now reconnect automatically.
- New and improved sales integration with [CBS NorthStar](#). The improved integration adds more detail and offers additional configuration options!
- Improved labor metrics in the [Manager Mobile app](#). Clocked-in employees are now included in the app's real-time labor and sales calculations.

Release Version 2204 | April

Improvements and Fixes:

- Stability improvements for our [CBS integration](#).
- Updated the logic for the [Paycor payroll exports](#) for salaried managers.
- Updated the date on manager approvals for our Approved PTO Requests report to display time in local time.
- Released a new report, Attendance Audit CSV, which allows you to see the modifications to your location's attendance over a period of time.
- Released another new report, Payroll Detail CSV, which contains a robust amount of information related to employee attendance, broken down by shift and pay code.

Release Version 2203 | March

Improvements and Fixes:

- Improved our support for Canada OT for multilocation customers using different EINs, so that OT calculates on a per-location basis, based on an existing setting toggle.
- Worked with Paycor to update our existing Paycor export file to support Shift Differential and Tip payouts.
- Improved our CBS NorthStar integration to better handle one-way syncs from TimeForge to CBS and two-way syncs between both systems.

Release Version 2202 | February

Improvements and Fixes:

- Certain pages (such as Attendance Options, Company Settings, and Location Settings) will now automatically use their updated and more responsive versions instead of the older TimeForge style.
- For pages that aren't ready to display the updated style just yet, we fixed some issues to ensure information would display properly.
- We made some tweaks to the Time Machine to decrease its memory load further.

Release Version 2201 | January

Improvements and Fixes:

- We pushed out an update to make it easier for customers to use single sign-on integrations.
- We released an update to the Time Machine to improve the way it stores large amounts of data over time.
- We're getting ready to release our centralized Shift4 Payments integration. If you're interested in using it to connect to Restaurant Manager, Future POS, or Harbor Touch, please let us know!
